

THE VIOLIN READING BOOK

Expanded Year-One Course + Visual Workbook + Technique Encyclopedia

Edition 2 - an expansion of the 60-page book you already liked. The original learning spine is preserved, but every weak jump is filled with visual explanation, drills, answer pages, repertoire and later-technique reference material.

Primary destination: you should be able to open beginner/intermediate violin music, decode what the symbols mean, map written pitches to strings and fingers, and eventually look at the first page of Mozart's Violin Concerto No. 3 in G major, K.216 and understand what the score is asking - even before you have the technique to perform all of it.

This is not a promise that reading alone makes every concerto playable. Reading, intonation, bow control, shifting, speed, musical style and interpretation are separate skills. The book tells you which layer you are learning and which layers can wait.

Contents - the course path

Section	What you learn
Front matter	how to use the book; accuracy rules; Hahn-inspired learning principles; year-one plan
Part I - The Violin as a Map	strings, fingers, low/high placements, every first-position string map, ambiguous pitches, intonation
Part II - Reading Pitch	staff, treble clef, lines/spaces, ledger lines, G-major notation, accidentals, key signatures, octave labels, worksheets + answers
Part III - Rhythm	note values, beams, rests, dots, ties/slurs, time signatures, common time, Vivaldi visual problem, rhythm worksheets + answers
Part IV - Score Symbols	tempo, dynamics, articulations, bow marks, pizz/arco, ornaments, repeats, double stops, tremolo, harmonics, quiz
Part V - Scales & Theory	what major/minor mean, whole/half steps, circle of fifths, all 12 major and natural-minor reference scales, scale order, arpeggios
Part VI - Skills Atlas	bow physics, six core strokes, 25-technique atlas, double stops/chords, trills, pizzicato, vibrato, positions, études
Part VII - Sight-reading Course	pre-read method, scaffold removal, 8 graded sight-reading cards + answers, Twinkle/Ode fragments, Hahn-inspired repertoire, 50 popular targets + 40 classical goals
Part VIII - Vivaldi Spring	your actual screenshot, annotation, decoding order, worksheet
Part IX - Mozart K.216	your actual destination score: score anatomy, first-system decoder, reading milestones, technique triage
Reference	sources, videos/QR links, copyright note, next 14 practice sessions

Use this as a course, not as a book to binge-read. The fastest path is often: learn one concept -> do its worksheet -> check answer -> apply it to a real line.

When you get confused, jump here

Your question	Go to
Which finger/string plays this pitch?	Part I string maps + Part II pitch worksheets
Which B or C is this?	Part I “Which B? Which C?” + ledger-line pages

How do I practice sight-reading?	Part VII
How do I decode my Spring screenshot?	Part VIII
How do I read Mozart without pretending I can perform it yet?	Part IX

How to use this book without getting overwhelmed

Every page uses one of four tags: NOW = practice this in your current stage; NEXT = learn after first-position reading is comfortable; LATER = keep as a reference; REFERENCE = recognize the term, but do not drill it yet.

Tag	Meaning
NOW	Do the exercise; you are building this skill now.
NEXT	Add after your current reading/fingering becomes stable.
LATER	Useful for Mozart and serious repertoire, but premature today.
REFERENCE	Know what the word/symbol means; no need to perform it yet.

Answer-page rule: almost every reading exercise is followed by an answer page. Try first. Then check. If you miss more than about 20%, repeat the same level instead of advancing.

Scaffold removal: early examples show note name + string + finger. Then one cue disappears at a time until you are reading normal notation. This mirrors the beginner tab scaffolding described by Violinspiration, where string letters may appear below notes and finger numbers above them.

Violinspiration: How to Read Sheet Music
Use this beside Part III. The book is designed to make the video less abstract, not replace it.
Open link

Accuracy policy for this edition

Violin fingering is contextual. A written pitch can sometimes be played on more than one string or in more than one position. Whenever that is true, this book labels the default beginner / first-position choice instead of pretending there is only one legal fingering.

Open-string pitch checks used here are exact same-pitch relationships in normal first position: G-string 4 = open D; D-string 4 = open A; A-string 4 = open E. A D-string 3rd-finger G is an octave above open G, not the same pitch.

Bow-direction symbols are also stated explicitly: down-bow = frog toward tip; up-bow = tip toward frog. The V-shaped bow mark means up-bow.

For advanced techniques, teachers may differ on sequence and physical approach. The book marks those areas as teacher-dependent and gives vetted video/article references instead of presenting one school as universal.

What “learn like Hilary Hahn started” can realistically mean

We cannot reconstruct every day of Hilary Hahn's childhood practice. What is documented is useful: she began with Suzuki; she has said that every note she plays began with the Twinkle Variations; she credits Suzuki with a lifelong habit of listening to recordings. At age five she began five years with Klara Berkovich, who taught bowing, double stops, vibrato, pizzicato and phrasing, and Hahn said she did many études, especially Wohlfahrt.

So this book borrows the principles, not a fantasy copy of a prodigy schedule: listen daily; master small motions; use simple pieces to plant future rhythms; revisit fundamentals; do études; add technique in layers; keep musical phrasing present from early on.

Suzuki Volume 1 repertoire sequence (reference, not reproduced here)

Twinkle Variations -> Lightly Row -> Song of the Wind -> Go Tell Aunt Rhody -> O Come, Little Children -> May Song -> Long, Long Ago -> Allegro -> Perpetual Motion -> Allegretto -> Andantino -> Etude -> three Minuets -> The Happy Farmer -> Gavotte.

The current international Suzuki Volume 1 recording features Hilary Hahn with pianist Natalie Zhu. Use a licensed Suzuki book/recording if you want to follow the exact method; this PDF uses public-domain/original drills and does not reproduce copyrighted Suzuki notation.

Your year-one map - ambitious, but ordered

Phase	Main work	Do not rush into
Weeks 1-4	Open strings, bow path, G/D/A/E note map, quarter/eighth rhythms, G major	Vibrato, shifting, fast spiccato
Weeks 5-10	First-position notes, low/high fingers, D/A/C scales, slurs, dotted rhythms, easy pieces	High positions
Weeks 11-20	Sight-reading, key signatures, arpeggios, Wohlfahrt/Ševčík-style drills, legato/staccato/martelé	Concerto tempo
Weeks 21-32	More first-position fluency, two-octave G, basic double stops, phrasing, vibrato preparation if intonation is stable	Wide/fast vibrato
Weeks 33-52	Third position + shifting if ready, arm/wrist vibrato development, spiccato introduction, longer repertoire	Trying to brute-force Mozart 3

This is a flexible map, not a deadline. A good year can be slower or faster. Physical ease and intonation matter more than checking boxes.

A 30-minute practice architecture

Minutes	Work
5	Tone: open strings, straight bow, relaxed sound
7	Reading: 5-10 notes; name -> string -> finger
7	Scale/arpeggio of the week; listen for pitch
7	Piece / étude: 1-4 measures, not the whole song
4	Review: one weak rhythm or bowing pattern

When you have 45-60 minutes, do not simply double everything. Add a second short repertoire block and a dedicated rhythm/ear block.

Violinspiration: Free 1-hour beginner course
You already know much of this material; keep it as a posture/bow/string-crossing reference.
Open link

PART I - THE VIOLIN AS A MAP

Before reading a score, know what the four strings and four fingers can physically do.

Goal: if I say “A-string low 2,” you know where to go; if I say “C natural,” you understand that the exact string/finger depends on register and context.

1. Strings: G - D - A - E

From lowest to highest, the open strings are G, D, A, E. “Open” means the left hand does not stop the string. In beginner annotations, open string is usually finger 0.

String	Sound/register	Open finger	Useful same-pitch check
G	lowest	0	G-string 4 = open D
D	low-middle	0	D-string 4 = open A
A	upper-middle	0	A-string 4 = open E
E	highest	0	no higher open string to match

NOW: bow G-D-A-E and back E-A-D-G with 4 slow bows each. Do not involve the left hand yet. Listen for a clean start and no accidental neighboring string.

2. Finger numbers: they mean fingers, not pitches

Symbol	Finger
0	open string
1	index
2	middle
3	ring
4	pinky

The same finger gives different notes on different strings. This is the rule that prevents the “2 means C-sharp” mistake. Always pair a finger number with a string.

Say: “A string, 2.” Better: “A string, high 2, C-sharp.”

3. Low and high fingers: why one finger can mean two notes

The violin has no frets. A finger can move a semitone. Beginners most often meet low 2 and high 2, but low 1 and high 3 also occur.

String	Low 1	Normal 1	Low 2	High 2	3	High 3	4
G	G $\sharp$	A	B $\flat$	B	C	C $\sharp$	D
D	E $\flat$	E	F	F $\sharp$	G	G $\sharp$	A
A	B $\flat$	B	C	C $\sharp$	D	D $\sharp$	E
E	F	F $\sharp$	G	G $\sharp$	A	A $\sharp$	B

NOW: only drill the notes needed by the key you are playing. Do not try to memorize every chromatic placement in one night.

4. First-position pitch order - visual reference

First-position schematic (not to physical scale)

Exact low/high finger labels are taught string-by-string; this diagram is only the pitch order.

This schematic shows pitch order, not exact millimetres. Tapes can help initial geography, but intonation ultimately comes from listening. A tuner/drone can check you; it should not replace your ear.

5. G string - every common first-position note

Written pitch name	Beginner fingering	Placement
G	0	open
A	1	normal 1
B $\flat$	low 2	low 2
B	high 2	high 2
C	3	3
C $\sharp$	high 3	high 3
D	4	4

G-string natural-note ladder

NOW: play each note slowly, say its name, then return to the open string. Stop if the hand squeezes.

G string reading drill - try before looking at answers

Stage B: staff + finger number only

Write the letter name below every note. Then say the string and finger aloud before playing.

G string drill - answers

Answer: note + string + finger

A musical staff with a treble clef. Ten notes are placed on the G string (the second line from the bottom). Each note is labeled with its letter name, the string it is on, and the finger number. The sequence of notes is: G (G str, f 0), A (G str, f 1), B (G str, f high 2), A (G str, f 1), C (G str, f 3), B (G str, f high 2), D (G str, f 4), C (G str, f 3), A (G str, f 1), and G (G str, f 0).

Note	String	Finger
G	G str	f 0
A	G str	f 1
B	G str	f high 2
A	G str	f 1
C	G str	f 3
B	G str	f high 2
D	G str	f 4
C	G str	f 3
A	G str	f 1
G	G str	f 0

If you missed two or more, repeat the previous page tomorrow. Do not memorize the visual sequence; reshuffle it yourself.

5. D string - every common first-position note

Written pitch name	Beginner fingering	Placement
D	0	open
E $\flat$	low 1	low 1
E	1	1
F	low 2	low 2
F $\sharp$	high 2	high 2
G	3	3
G $\sharp$	high 3	high 3
A	4	4

Stage B: staff + finger number only

f 0 f low 1 f low 2 f low 1 f 3 f low 2 f 4 f 3 f low 1 f 0

Write the letter name below every note. Then say the string and finger aloud before playing.

E string drill - answers

Answer: note + string + finger

E	F	G	F	A	G	B	A	F	E
E str	E str	E str	E str	E str	E str	E str	E str	E str	E str
f 0	f low 1	f low 2	f low 1	f 3	f low 2	f 4	f 3	f low 1	f 0

If you missed two or more, repeat the previous page tomorrow. Do not memorize the visual sequence; reshuffle it yourself.

6. Same written pitch, more than one fingering

Violin scores normally specify pitch, not always the string. As you advance, the same pitch can be played on different strings/positions for tone color, legato or convenience. Beginner editions may add finger numbers/string letters.

Pitch	Default beginner choice	Common alternative
D	open D	G-string 4
A	open A	D-string 4
E	open E	A-string 4
Higher D	A-string 3	other strings in higher positions later

This is why a plain text exercise like “D, B, G, F-sharp, C...” is incomplete unless the octave/register or staff position is specified. Sheet music solves that ambiguity by vertical placement.

7. The exact problem you noticed: “Which B? Which C?”

Three different Bs - the staff tells you which register

A musical staff in treble clef showing three different B notes. The first B is on the first line (G string, first finger). The second B is on the second line (A string, first finger). The third B is on the fourth line (E string, fourth finger). Each note is a quarter note.

B
G str
f high 2

B
A str
f 1

B
E str
f 4

Three different Cs

A musical staff in treble clef showing three different C notes. The first C is on the first space (G string, third finger). The second C is on the second line (A string, second finger). The third C is on the fourth line (E string, later/higher position). Each note is a quarter note.

C
G str
f 3

C
A str
f low 2

C
E str
f later / higher position

You do not need to think “B3/B4/B5” every time yet. Learn the shape and height on the staff. Octave numbers are precise labels we add later.

8. Intonation: knowing the finger is not the same as landing in tune

A score tells you the target pitch, but the violin has no fret to enforce it. Build three checks: ear (hear target), resonance/open-string relationships, and external check (tuner/drone/teacher).

Practice rule: play the note cleanly without vibrato while learning its location. Vibrato can hide small pitch errors from your own perception.

NOW: use your G major scale slowly. Before each note, silently hear its direction (up/down) and then land. Do not slide around searching unless you are deliberately doing an intonation exercise.

PART II - READING PITCH ON THE STAFF

Now we connect the violin map to the written language.

Goal: stop reading only finger numbers. See a symbol, name the pitch, choose a string/finger, then play.

9. What is the five-line thing? The staff

The staff has five lines and four spaces. Each step upward - line to space or space to line - moves to the next letter name: A, B, C, D, E, F, G, then repeats.

Bottom line E -> top line F

Higher on the page usually means higher pitch. The shape of the note tells duration; its vertical position tells pitch.

10. What is the curly “goal-goal thing”? The treble clef

The symbol  is the treble clef, also called the G clef. It curls around the second line, defining that line as G. Violin music is normally written in treble clef.

A clef is not a note to play. It is the coordinate system that tells you what the staff positions mean.

NOW: when you open a violin score, point to the clef and say: “treble clef; second line is G.”

11. Lines and spaces - a better method than mnemonics alone

Staff position	Pitch letter
bottom line	E
1st space	F
2nd line	G
2nd space	A
middle line	B
3rd space	C
4th line	D
4th space	E
top line	F

Mnemonics can help, but fluent readers eventually recognize landmarks and intervals. Your best landmarks are open strings G-D-A-E, because they connect directly to the instrument.

12. The four open strings written on the staff

Memorize these four landmarks first

This is the first sight-reading drill recommended by many beginner methods: recognize open strings before adding fingers.

13. Ledger lines - notes do not stop at the staff

A ledger line is a short line added for pitches above or below the five-line staff. The low G string lives below the staff, so violinists meet lower ledger lines immediately.

G-string territory climbs toward the main staff

14. Note-reading scaffold - Stage A

At Stage A, every note is heavily annotated. This is training-wheel notation: pitch name + string + finger. Use it until the mapping makes sense, then remove help.

Your one-octave G-major scale, fully annotated

NOW: play this exactly as the scale you already know physically. The new job is to watch the staff while you play.

15. G-major scale - Stage B

Finger cue remains; note name/string are removed

Before playing, point to each note and name it. If you cannot, return to Stage A.

16. G-major scale - Stage C

Only the normal staff remains

This is what ordinary sheet music starts to look like. Your hand should derive the fingering from the written pitch and key.

17. Exercise: read eight G-major notes

Write: note name | string | finger

This is the corrected version of the earlier “D B G F-sharp C A E G” exercise: the staff positions now tell you exactly which D/B/G/C/A/E.

17A. Answers: eight G-major notes

Answer key

Note	String	Finger
D	D str	f 0
B	G str	f high 2
G	D str	f 3
F#	D str	f high 2
C	G str	f 3
A	G str	f 1
E	D str	f 1
G	G str	f 0

18. Sharps, flats and naturals - the three signs

Sign	Name	Meaning
#	sharp	raise the written pitch by one semitone
b	flat	lower by one semitone
♮	natural	cancel a sharp/flat in force and use the natural pitch

On violin, the sign often means a finger moves. Example: on the D string, F is low 2; F-sharp is high 2. On the A string, C is low 2; C-sharp is high 2.

19. What is the # beside the clef? A key signature

A sharp or flat immediately after the clef is usually part of the key signature. It applies to every matching letter in every octave unless cancelled by an accidental.

Mozart K.216 is in G major. Its key signature contains one sharp: F-sharp. So an F written with no accidental is normally F-sharp in that key.

Do not confuse a key-signature sharp with an accidental printed directly beside one note. The visual sign is the same; its position/function differs.

20. Accidentals inside a measure

An accidental written before a note changes that pitch for the remainder of the measure in the same staff position, unless cancelled or overridden. Bar lines usually reset ordinary accidentals back to the key signature.

This is why you must scan a measure before playing: a C-sharp may remain active later in the same bar even if the sharp sign is not repeated.

NOW: when reading, say “key signature first; then local accidentals.”

21. Octave numbers - useful reference, not your first reading language

Scientific pitch notation adds a number so text can distinguish multiple Cs or Bs. For example, the lower C you play with G-string 3 is C4; the higher C with A-string low 2 is C5.

You do not need to verbalize “C4” while sight-reading. The staff already shows the register. Use octave numbers when discussing a pitch outside the staff or when text would otherwise be ambiguous.

22.1 Sight-reading worksheet - Open strings only

No answers on this page

For each note, write: letter name -> string -> finger. Then play each as a separate slow bow. If an accidental appears, say it aloud.

22.5 Sight-reading worksheet - All first-position landmark notes

No answers on this page

For each note, write: letter name -> string -> finger. Then play each as a separate slow bow. If an accidental appears, say it aloud.

22.5 Answer page - All first-position landmark notes

Check your decoding

A musical staff with a treble clef and five lines. Twelve notes are placed on the staff, each with a vertical line extending upwards. Below each note is a label consisting of a letter, a string number, and a finger number. The notes and labels are as follows:

Note	Label
G	G str f 0
D	D str f 0
A	A str f 0
E	E str f 0
A	E str f 3
B	G str f high 2
B	G str f high 2
F#	D str f high 2
C	A str f low 2
G	E str f low 2
G	G str f 0
D	D str f 0

PART III - RHYTHM: WHEN AND HOW LONG

Pitch answers “what note?” Rhythm answers “when?”

Goal: be able to tell the difference between a quick pair of notes, a double stop, a slur and vibrato - the exact confusion that came up in Vivaldi Spring.

23. Note anatomy: head, stem, flag, beam

The notehead sits at the pitch position. A stem is the vertical line. A flag marks shorter values on isolated notes. A beam can replace flags when short notes are grouped.

Value in 4/4	Common name	Visual idea
4 beats	whole note	open notehead, no stem
2 beats	half note	open notehead + stem
1 beat	quarter note	filled notehead + stem
1/2 beat	eighth note	one flag / one beam
1/4 beat	sixteenth note	two flags / two beams

24. Beamed notes versus double stops - visual

BEAMS connect sequential notes; **STACKS** mean simultaneous notes

one after the other

Example: B then A

two pitches together

double stop / chord texture

Vibrato is neither of these: vibrato is an expressive pitch oscillation on a sustained stopped note.

Rule: if noteheads are side-by-side in time and connected horizontally by a beam, play them sequentially. If two noteheads are vertically aligned at the same rhythmic position, they are intended to sound together (a double stop/chord texture).

25. The Vivaldi screenshot: what the “double things” actually are

In this line, the little tightly grouped notes are short rhythmic values - not vibrato. The beams tell you subdivision. Fingering numbers above them are left-hand cues in the beginner arrangement.

Your first job is to separate three layers: pitch (which note?), rhythm (how long?), and bowing (one bow or separate bows?).

26. One beam: eighth notes

An eighth note is usually half a beat in 4/4. Two eighth notes therefore fit into one quarter-note beat. Count 1 &, then 2 &.

A beam by itself does not mean “same bow.” A curved slur is the usual notation that groups multiple pitches into one bow.

27. Two beams: sixteenth notes

A sixteenth note is one quarter of a beat in 4/4. Four fit in one quarter-note beat. A common counting system is 1 e & a. Two adjacent sixteenths may appear as a quick pair inside a larger beat pattern.

NOW: clap four even taps per metronome beat at 50-60 BPM before asking your fingers to do it.

Violinspiration: How to Read Rhythms

Use this when the visual shapes make sense but counting still feels abstract.

[Open link](#)

28. Rests: silence has duration too

Rest type	Duration in 4/4
whole rest	4 beats
half rest	2 beats
quarter rest	1 beat
eighth rest	1/2 beat
sixteenth rest	1/4 beat

A rest is not “nothing to read.” You must keep the pulse and prepare the next bow/finger during the silence.

29. Dots after notes

A dot after a note adds half of that note's original value. A dotted quarter is $1 + 1/2 = 1.5$ beats. A dotted half is $2 + 1 = 3$ beats.

Do not confuse a duration dot beside a note with a staccato dot above/below a note. Same small dot shape; different placement and meaning.

30. Tie vs slur - same curve, different job

Mark	What it connects	What to do
Tie	two notes of the SAME pitch	hold as one longer sound; do not re-articulate
Slur	different pitches (or a phrase group)	on violin, commonly play the grouped notes in one bow

Context tells you which it is. If the curved line joins identical pitches across a bar line, it is almost certainly a tie.

31. Time signatures: the numbers after the key signature

Meter	Beginner reading idea
4/4	four quarter-note beats per bar
3/4	three quarter-note beats per bar
2/4	two quarter-note beats per bar
6/8	six eighth-note subdivisions, commonly felt as two big beats

The top number tells how many notated beats/subdivisions are grouped in a measure; the lower number identifies the notated beat unit. Compound meters such as 6/8 are felt differently from six independent beats.

32. Common time: the C symbol

A large C where you expect a time signature usually means common time, equivalent to 4/4. You will see this on many classical scores, including editions of Mozart K.216.

Do not read the C as the pitch C. Its position - immediately after clef/key signature - tells you it is a meter symbol.

33. Bar lines, measures and pickups

Vertical bar lines divide music into measures. A pickup/anacrusis is an incomplete opening measure that leads into the first full strong beat. This changes how you count the phrase but not the pitch.

NOW: before playing any line, count bars visually and find where beat 1 of each measure sits.

34.1 Rhythm worksheet - Quarter and eighth

Step 1: tap only the rhythm. Step 2: say the note names in rhythm. Step 3: air-bow. Step 4: play.

34.4 Answer / practice hints - Mixed

Pitch answers shown; rhythm values remain visible

A musical staff in treble clef showing seven notes. The notes are: D (first line), E (second line), F# (third line, with a sharp sign), G (third space), A (fourth line), G (third space), and F# (second line, with a sharp sign). Each note has a stem and a flag. Below the staff, the notes are labeled with their letter names and fingerings.

D	E	F#	G	A	G	F#
D str	D str	D str	D str	A str	D str	D str
f 0	f 1	f high 2	f 3	f 0	f 3	f high 2

If pitch was correct but rhythm collapsed, isolate rhythm. If rhythm was correct but fingers hesitated, go back to pitch-only reading.

PART IV - EVERYTHING ELSE WRITTEN ON A VIOLIN SCORE

A score is more than pitch and rhythm.

Goal: recognize the most common instructions so a page stops looking like random dots, curves and Italian words.

35. Tempo words

- Largo - very broad/slow
- Adagio - slow
- Andante - walking/moderate
- Moderato - moderate
- Allegro - fast/lively
- Presto - very fast
- rit./rall. - gradually slow
- a tempo - return to prior tempo

36. Dynamics

- ppp/pp/p - very soft to soft
- mp - moderately soft
- mf - moderately loud
- f/ff/fff - loud to very loud
- cresc. or hairpin opening - grow louder
- dim./decresc. or closing hairpin - grow softer
- subito - suddenly

37. Articulation

- staccato dot - shortened/separated
- tenuto line - sustain full value / weight
- accent > - emphasize attack
- marcato ^ - strongly marked
- fermata - hold longer than written value, context/style decides how long

38. Bow-direction marks

- down-bow bracket-like mark - frog toward tip
- up-bow V-shaped mark - tip toward frog
- no mark - use written/learned bowing or a sensible alternating stroke

39. String-instrument words

- arco - use the bow
- pizz. - pluck
- con sordino - mute on
- senza sordino - mute off
- sul G / sul D etc. - play on specified string
- sul ponticello - near bridge
- sul tastò - over fingerboard

40. Repeats and navigation

- repeat barlines :|| / ||: - repeat section
- 1st/2nd endings - different endings on repeats
- D.C. - go back to beginning
- D.S. - return to sign
- Fine - end
- coda - jump to coda when instructed
- rehearsal letters/numbers - location markers, not notes

41. Ornaments

- tr - trill: rapid alternation with neighboring note; execution depends on style/context
- grace note - small printed note leading into/around main note
- turn/mordent - ornament patterns; exact realization can be stylistic
- Do not improvise ornaments from the symbol until you know the period/style.

42. Double stops and chords

A double stop means two pitches at once on two strings. In notation, the noteheads are vertically stacked at the same rhythmic position. Three/four-note stacks are chords or multiple stops; violinists may roll/break some chords depending on style, tempo and physical feasibility.

BEAMS connect sequential notes; STACKS mean simultaneous notes

one after the other

Example: B then A

two pitches together

double stop / chord texture

Vibrato is neither of these: vibrato is an expressive pitch oscillation on a sustained stopped note.

NEXT: begin with open-string double stops only after single-string bow levels are stable.

43. Tremolo: two completely different visual situations

A single-note tremolo uses short diagonal strokes on a stem to indicate rapid repeated bowing. A two-note tremolo uses beam-like strokes between two notes and means rapid alternation between them. This is another reason “multiple lines” cannot be interpreted without context.

REFERENCE: do not confuse tremolo beams with ordinary rhythmic beams. Check whether the strokes connect stems as a tremolo notation and whether the note values indicate measured/unmeasured tremolo.

44. Harmonics

A small circle above a note often indicates a harmonic. Natural harmonics use very light finger contact at a node instead of pressing the string fully to the fingerboard. Artificial harmonics combine a stopped note with a lightly touched note.

LATER: recognize the symbol now; do not make harmonics a first-month priority.

45. Finger numbers and string indications in edited music

Numbers 1-4 printed near notes are editorial fingering suggestions unless the musical context clearly uses numbers for something else. A 0 means open string. String indications may be written as G/D/A/E, Roman numerals, or “sul G” style directions depending on edition.

Professional editions may give fewer finger numbers because choosing fingerings is part of musicianship.

46. Position numbers are NOT finger numbers

“III position” or similar text refers to the location of the whole left hand. Your first finger can play different pitches in first, second, third, fourth position, etc. Finger number alone is therefore never a complete pitch address.

LATER: Part VII teaches third/fourth position and why Mozart 3 eventually uses them.

47. Score-language quiz

1. □ = _____
2. # after clef = _____
3. C after key signature = _____
4. p = _____
5. f = _____
6. V-shaped bow sign = _____
7. two vertically stacked notes = _____
8. curved line over several different pitches = _____
9. dot beside a note = _____
10. dot above/below a note = _____
11. tr = _____
12. pizz. = _____
13. arco = _____

47A. Score-language answers

1. treble/G clef
2. key-signature sharp (context dependent)
3. common time = 4/4
4. soft
5. loud
6. up-bow
7. double stop/chord texture
8. slur (commonly one bow on violin)
9. duration dot: add half the note value
10. staccato articulation
11. trill
12. pluck
13. return to bowing

PART V - SCALES, KEYS, MAJOR AND MINOR

Now the key signature becomes logical instead of arbitrary.

Goal: understand what “G major” and “G minor” actually mean, what scales you should practice, and what belongs in the long-term reference library.

48. What is a scale?

A scale is an ordered collection of pitches, usually heard from a tonal center (the tonic) upward/downward. A scale is not just a finger exercise; it teaches the pitch vocabulary of a key.

Your G-major scale is G A B C D E F-sharp G. The last G is the tonic one octave higher.

49. Whole steps and half steps

A half step / semitone is the smallest standard step in ordinary Western chromatic notation. Two semitones make a whole step. On violin, half steps are physically close fingers; whole steps are farther apart.

The major-scale interval pattern is whole - whole - half - whole - whole - whole - half.

50. Why G major is major

Starting on G and applying the major pattern gives: G-A (W), A-B (W), B-C (H), C-D (W), D-E (W), E-F-sharp (W), F-sharp-G (H). That F-sharp is why G major has one sharp in the key signature.

Major does not literally mean “happy.” It describes an interval/key structure. Emotional effect depends on melody, harmony, rhythm, register, articulation and context.

51. What is G minor? Parallel minor

G minor shares the same tonic G but uses a different scale structure. The natural minor form is G A B-flat C D E-flat F G. That is why G minor has a different key signature from G major.

G major and G minor are parallel keys: same tonic, different mode.

52. Relative minor: same key signature, different tonic

Every major key has a relative natural minor that uses the same key signature. G major's relative minor is E minor. The pitch collection overlaps, but the tonal center and harmonic behavior change.

Each major key has a relative minor with the same key signature. Parallel major/minor (G major vs G minor) do NOT share the same signature.

53. Natural, harmonic and melodic minor

Natural minor is the basic minor collection. Harmonic minor raises scale degree 7 to create a stronger leading tone. Melodic minor in classical teaching usually raises 6 and 7 ascending and returns to natural minor descending; real repertoire can use these notes flexibly.

Do not attempt to memorize 36 minor scales now. Learn the concept, then drill the specific keys in your repertoire.

54. The 12 practical major-key reference spellings (1/2)

Key	Scale
C	C D E F G A B C
G	G A B C D E F $\sharp$ G
D	D E F $\sharp$ G A B C $\sharp$ D
A	A B C $\sharp$ D E F $\sharp$ G $\sharp$ A
E	E F $\sharp$ G $\sharp$ A B C $\sharp$ D $\sharp$ E
B	B C $\sharp$ D $\sharp$ E F $\sharp$ G $\sharp$ A $\sharp$ B

REFERENCE: enharmonic keys can be spelled differently (for example F-sharp/G-flat). “12 pitch classes” does not mean music notation has only 12 possible key signatures.

54. The 12 practical major-key reference spellings (2/2)

Key	Scale
F#	F# G# A# B C# D# E# F#
Db	Db Eb F Gb Ab Bb C Db
Ab	Ab Bb C Db Eb F G Ab
Eb	Eb F G Ab Bb C D Eb
Bb	Bb C D Eb F G A Bb
F	F G A Bb C D E F

REFERENCE: enharmonic keys can be spelled differently (for example F-sharp/G-flat). “12 pitch classes” does not mean music notation has only 12 possible key signatures.

55. Natural minor reference (1/2)

Key	Natural minor scale
A	A B C D E F G A
E	E F# G A B C D E
B	B C# D E F# G A B
F#	F# G# A B C# D E F#
C#	C# D# E F# G# A B C#
G#	G# A# B C# D# E F# G#

Harmonic and melodic forms change degrees 7, or 6+7, as explained on the previous page.

55. Natural minor reference (2/2)

Key	Natural minor scale
D#	D# E# F# G# A# B C# D#
Bb	Bb C Db Eb F Gb Ab Bb
F	F G Ab Bb C Db Eb F
C	C D Eb F G Ab Bb C
G	G A Bb C D Eb F G
D	D E F G A Bb C D

Harmonic and melodic forms change degrees 7, or 6+7, as explained on the previous page.

56. Other scale families - know they exist

Scale family	Basic idea	Priority
Chromatic	all 12 semitones	NEXT/LATER
Major pentatonic	5-note major-derived collection	REFERENCE/useful for popular music
Minor pentatonic	5-note minor-derived collection	REFERENCE/useful for popular music
Blues	minor pentatonic + altered “blue” note(s)	REFERENCE
Modes	Ionian, Dorian, Phrygian, Lydian, Mixolydian, Aeolian, Locrian	LATER theory
Whole-tone	all whole steps	LATER
Diminished/octatonic	alternating step patterns	ADVANCED/REFERENCE

There is no finite list called “all scales” in all musical traditions. This section covers the standard Western tonal families most relevant to violin study.

57. Arpeggios: scales are stepwise; arpeggios outline chords

A basic G-major arpeggio uses G-B-D-G. Instead of every scale degree, you play chord tones. Arpeggios train string crossing, hand geography, ear recognition of harmony and later shifting.

NOW: start G, D and A major arpeggios only after you can name the scale notes comfortably.

58. Your scale order - what to actually practice now

Stage	Scales
NOW	G major 1 octave; then D major 1 octave; A major 1 octave; C major 1 octave
NEXT	E natural minor; G major 2 octaves; F major; B-flat major as fingering expands
LATER	full major/minor set, 2-3 octaves, faster bowings, broken thirds, chromatic
ADVANCED	3-octave scales/arpeggios, double-stop scales, sophisticated bowings

ABRSM is only one external benchmark, not your curriculum; its practical system also treats scales/arpeggios and sight-reading as separate skills, which is a useful reminder not to replace one with the other.

59. Scale-reading page - G major

G major: read before playing

Write the note names first. Then find a comfortable first-position fingering. Scale spelling: G A B C D E F# G.

59A. G major - beginner fingering answer

One practical first-position solution

A musical staff in treble clef showing the G major scale in first position. The notes are G, A, B, C, D, E, F#, and G. Each note is accompanied by a finger number (f 0, f 1, f high 2, f 3, f 0, f 1, f high 2, f 3) and a string number (G str, G str, G str, G str, D str, D str, D str, D str). The notes are placed on the staff as follows: G (first line), A (first space), B (second line), C (second space), D (third line), E (third space), F# (fourth line), and G (fourth space).

Note	String	Fingering
G	G str	f 0
A	G str	f 1
B	G str	f high 2
C	G str	f 3
D	D str	f 0
E	D str	f 1
F#	D str	f high 2
G	D str	f 3

Some pitches can have alternative fingerings. This answer chooses a beginner solution, not the only professional fingering.

59. Scale-reading page - D major

D major: read before playing

Write the note names first. Then find a comfortable first-position fingering. Scale spelling: D E F# G A B C# D.

59A. D major - beginner fingering answer

One practical first-position solution

The musical notation shows the D major scale in first position on a treble clef staff. The notes and their fingerings are as follows:

Note	Fingering
D	D str f 0
E	D str f 1
F#	D str f high 2
G	D str f 3
A	A str f 0
B	A str f 1
C#	A str f high 2
D	A str f 3

Some pitches can have alternative fingerings. This answer chooses a beginner solution, not the only professional fingering.

59. Scale-reading page - A major

A major: read before playing

Write the note names first. Then find a comfortable first-position fingering. Scale spelling: A B C# D E F# G# A.

59A. A major - beginner fingering answer

One practical first-position solution

A musical staff in treble clef showing the A major scale in first position. The notes are A, B, C#, D, E, F#, G#, and A. Fingerings are indicated by numbers 0, 1, 2, and 3. The notes are: A (f 0), B (f 1), C# (f high 2), D (f 3), E (f 0), F# (f 1), G# (f high 2), and A (f 3).

A	B	C#	D	E	F#	G#	A
A str	A str	A str	A str	E str	E str	E str	E str
f 0	f 1	f high 2	f 3	f 0	f 1	f high 2	f 3

Some pitches can have alternative fingerings. This answer chooses a beginner solution, not the only professional fingering.

59. Scale-reading page - C major

C major: read before playing

Write the note names first. Then find a comfortable first-position fingering. Scale spelling: C D E F G A B C.

59A. C major - beginner fingering answer

One practical first-position solution

The image shows a musical staff with a treble clef. The C major scale is written in first position, starting on middle C (C4) and ascending to C5. The notes are: C (middle C), D, E, F, G, A, B, and C (octave). The fingering is indicated by numbers 1-3 below the notes. The string used for each note is indicated by 'str' (string) and 'f' (finger) below the notes.

Note	String	Finger
C	G	3
D	D	0
E	D	1
F	D	low 2
G	D	3
A	A	0
B	A	1
C	A	low 2

Some pitches can have alternative fingerings. This answer chooses a beginner solution, not the only professional fingering.

PART VI - VIOLIN SKILLS ATLAS

Everything you asked to have in one place - but ranked by when it matters.

Goal: know the landscape of violin technique without confusing “I have heard of it” with “I should drill it today.”

60. The skill tree

Layer	Skills
Foundation	posture, instrument support, bow hold, bow lane, open strings, tone, left-hand frame, intonation
Reading	staff, rhythm, key signatures, bow/finger marks, sight-reading
Core bowing	détaché, legato/slurs, staccato, martelé, portato, basic spiccato
Core left hand	low/high fingers, 4th finger, extensions, trill prep, double stops, chords
Expressive	dynamics, phrasing, vibrato, tone color, bow speed/weight/contact point
Mobility	shifting, 3rd/2nd/4th/5th+ positions
Advanced bowing	sautillé, ricochet, flying staccato/spiccato, collé, fouetté, jeté, jumping arpeggios
Effects	tremolo, sul ponticello, sul tasto/flautando, col legno, harmonics, left-hand pizzicato

61. Bow physics in plain language

Tone changes mainly with bow speed, bow weight/pressure, contact point, amount of hair and straightness. Moving closer to the bridge generally requires a different speed/weight balance than playing near the fingerboard.

NOW: before collecting fancy bow-stroke names, make one open string sound steady from frog to tip and back.

62. Core bow stroke: Détaché [NOW]

separate bow per note, generally full value, default stroke when nothing else is marked

Notation: No special symbol is necessary.

Practice: start on open A or D. Use 4 repetitions of a simple rhythm, listen for consistent attack, then apply to a scale. Stop when the right shoulder/hand stiffens.

62. Core bow stroke: Legato / slurred bowing [NOW]

smoothly connected; on violin a slur commonly means multiple pitches in one bow

Notation: Curved slur over notes.

Practice: start on open A or D. Use 4 repetitions of a simple rhythm, listen for consistent attack, then apply to a scale. Stop when the right shoulder/hand stiffens.

62. Core bow stroke: Staccato [NEXT]

short/separated articulation; can be separate-bow or multiple notes in one bow depending notation/context

Notation: Dots; with slur may indicate one-bow staccato.

Practice: start on open A or D. Use 4 repetitions of a simple rhythm, listen for consistent attack, then apply to a scale. Stop when the right shoulder/hand stiffens.

62. Core bow stroke: Martelé [NEXT]

accented “hammered” attack with bow staying on string

Notation: accent/wedge context; terms may overlap in notation

Practice: start on open A or D. Use 4 repetitions of a simple rhythm, listen for consistent attack, then apply to a scale. Stop when the right shoulder/hand stiffens.

62. Core bow stroke: Portato [NEXT]

gently pulsed notes under one bow

Notation: tenuto-like marks under a slur

Practice: start on open A or D. Use 4 repetitions of a simple rhythm, listen for consistent attack, then apply to a scale. Stop when the right shoulder/hand stiffens.

62. Core bow stroke: Spiccato [NEXT/LATER]

controlled off-string bouncing stroke

Notation: often inferred from style/dots/tempo rather than one unique symbol

Practice: start on open A or D. Use 4 repetitions of a simple rhythm, listen for consistent attack, then apply to a scale. Stop when the right shoulder/hand stiffens.

63. Bowing atlas - 25 useful terms

Technique	Stage	One-line meaning
Détaché	core	on-string separate bows
Legato	core	smooth/connected
Tenuto	core	full length/held
Portato	core	pulsed notes in one bow
Double stops	core later	two strings at once
Chords	later	3-4 note multiple-stop texture
Staccato	core	short/separated
Up/down-bow staccato	later	multiple staccato notes in one bow direction
Martelé	core next	accented on-string attack
Sustained martelé	later	accent then sustain
Spiccato	next/later	off-string bounce
Ricochet	advanced	natural multiple bounce in one bow
Collé	later	pinched attack from air

Technique	Stage	One-line meaning
Sautillé	advanced	fast springing stroke
Fouetté	advanced	whipped stroke
Jeté	advanced	thrown/bounced stroke
Chop	special	percussive bow effect
Pizzicato	core next	pluck string
Tremolo	later	rapid repeated bow/alternation
Sul ponticello	effect	bow near bridge
Sul tasto	effect	bow over fingerboard
Col legno	effect	wood of bow contacts string
Au talon	term	at frog/heel
Arco	term	return to bow after pizz.
Marcato	articulation	strongly marked/emphasized

Violin Lounge: 24 bowing techniques

Use as a visual encyclopedia. You are NOT supposed to master all 24 in year one.

Open link

64. Double stops - first safe progression [NEXT]

1) Bow two open adjacent strings. 2) Play one open + one stopped note. 3) Two stopped notes only after each pitch is individually secure. 4) Listen to both voices, not just the top one.

The notation is a vertical stack. The challenge is both left-hand intonation and right-arm bow level.

65. Chords and rolled chords [LATER]

Three- and four-note violin chords are written as vertical stacks. Depending on period, tempo and shape, the violinist may break/roll them because the curved bridge makes sustained four-string contact impractical. Exact execution is style- and passage-dependent.

Do not infer “all four notes must be sustained perfectly simultaneously” from the visual stack.

66. Trills and finger action [NEXT]

A trill rapidly alternates a written note and an adjacent note. Before speed, train a relaxed finger lift/drop and accurate base pitch. Classical ornament conventions can differ by period; use a score/teacher/reference for exact realization.

67. Pizzicato [NEXT]

Pizz. tells you to pluck instead of bow. Arco tells you to resume bowing. Right-hand pizzicato is standard; left-hand pizzicato is a later virtuoso technique.

68. Vibrato - readiness gate [LATER, but learn what it is now]

Vibrato is a controlled oscillation around a stopped pitch for expression. Violinspiration recommends that beginners first be able to play in tune in first position without tension. That is the gate used in this book.

Do not use vibrato as a way to make an uncertain note “sound musical.” First learn the center of the pitch.

Violinspiration: Vibrato guide

Covers arm, wrist and finger vibrato plus preparatory exercises. Use when the readiness gate is met.

[Open link](#)

69. Arm vibrato [LATER]

In arm vibrato, the impulse comes mainly from forearm/elbow motion and the hand/finger responds as a unit. Start with deliberately large, slow movement away from performance tempo; keep the thumb/hand free of squeezing.

Practice concept: stopped note -> rock backward to a slightly flatter pitch -> return to the target. Begin with slow metronome pulses. The target pitch must remain identifiable.

70. Wrist vibrato [LATER]

In wrist vibrato, the hand rocks from the wrist while the forearm remains comparatively stable. The fingertip stays in contact and the finger joints remain supple.

Teachers differ on whether arm or wrist should be learned first. Violinspiration explicitly presents both as reasonable starting types; this book does not force one anatomy on every player.

71. Finger vibrato [ADVANCED REFERENCE]

Finger vibrato uses very small impulses and is typically a later refinement requiring loose finger joints. It is not the next step simply because your wrist vibrato feels difficult.

72. A 6-week vibrato micro-plan - only after readiness

Week	Focus
1	loosen hand/finger joints away from instrument; silent rocking
2	slow arm motion, 1 oscillation per metronome beat
3	slow wrist motion, same control goal
4	2-4 oscillations per beat; all strong fingers, no speed race
5	sustained notes; start/stop vibrato deliberately
6	add to selected long notes in an easy melody; keep intonation center

If tension or pitch-center loss increases, go backward. Vibrato development often takes months, not six weeks; this is a sequence, not a guarantee.

73. What is a “position”? [NEXT/LATER]

A position describes where the whole left hand is located. First position is your current home. In third position, first finger moves to where third finger was in first position on the same string.

Example A string: first-position 3rd finger D -> shift hand -> third-position 1st finger D.

74. Third position [NEXT when first position is stable]

String	1st finger in 3rd position
G	C
D	G
A	D
E	A

Learn the destination pitch, release thumb pressure, shift the hand as a unit, then check intonation. Sliding noise is a practice tool at first; polished shifts become much more discreet.

Violinspiration: Third position
Use after first-position pitch and hand shape are reliable.
[Open link](#)

75. Fourth position - why it matters to your Mozart goal [LATER]

String	1st finger in 4th position
G	D
D	A
A	E
E	B

Violinspiration specifically uses a quick passage from Mozart Concerto No.3 to show why fourth position can keep a rapid line smooth instead of making awkward position changes. This is a future bridge to your target, not a skill to practice this week.

76. Ševčík, Wohlfahrt and Kayser - why études exist

A song asks many skills at once. An étude isolates patterns long enough for the body to learn them. Public-domain resources give you serious historical practice material without forcing every exercise to be a nursery tune.

Method	Useful stage	What it contains
Ševčík Op.1 Book 1	first position	systematic first-position exercises
Wohlfahrt Op.45 Book I	early/intermediate beginner	30 easy first-position studies
Kayser Op.20 Book I	after early études	easy studies in first position; later books expand positions
Hřímálý Scale Studies	later scale work	systematic scale/technical practice

Links are in the source section. Start with small selections, not page marathons.

PART VII - SIGHT-READING COURSE

This is the practical bridge between knowing facts and actually reading music.

Goal: read progressively harder material without depending forever on finger numbers.

77. The 20-second pre-read

Before playing an unseen line, scan: clef -> key signature -> time signature -> tempo -> lowest/highest pitch -> accidentals -> rhythm traps -> slurs/bow marks -> repeats. Then silently hear/count the first beat before moving the bow.

Sight-reading is not “play immediately without thinking.” Good readers preview patterns very quickly.

78. The four-layer rescue method

Layer	Do this alone
Pitch	say note names, no rhythm
Rhythm	clap/tap, ignore pitches
Left hand	finger silently / pizzicato slowly
Bow	air-bow rhythm/slurs, then combine

If a line fails, identify the layer. Do not mindlessly replay the whole line ten times.

79. Progressive scaffold removal

Stage	What the page shows
A	note name + string + finger + staff
B	finger + staff
C	staff + occasional string cue
D	normal notation; finger only where non-obvious
E	normal score; you choose fingering/bowing where editorially open

The point is to remove help before it becomes a crutch, but not so early that you practice wrong notes.

80.1 Sight-reading card - Open strings

Try once without stopping. Then diagnose.

Pass condition: keep a steady slow pulse, correct at least 8/10 pitches, no panic pause longer than one beat. If not, slow the metronome and repeat tomorrow.

80.1 Answer card - Open strings

Answer: one beginner fingering

A musical staff in treble clef showing the first four positions of the open strings on a violin. The notes are D (bottom line), A (second space), E (third space), and G (fourth space). Each note is marked with a vertical line indicating the string and a '0' indicating the open string. The sequence is repeated twice: D, A, E, G, D, A, E, G, D, A.

D	A	E	G	D	A	E	G	D	A

f 0	f 0	f 0	f 0	f 0	f 0	f 0	f 0	f 0	f 0

80.2 Sight-reading card - G string

Try once without stopping. Then diagnose.

Pass condition: keep a steady slow pulse, correct at least 8/10 pitches, no panic pause longer than one beat. If not, slow the metronome and repeat tomorrow.

80.2 Answer card - G string

Answer: one beginner fingering

A musical staff with a treble clef and five lines. Ten notes are placed on the staff, each with a vertical line extending downwards to a letter and a fingering number. The notes and their labels are as follows:

Note	Fingering
B	G str f high 2
C	G str f 3
G	G str f 0
A	G str f 1
B	G str f high 2
C	G str f 3
G	G str f 0

80.4 Sight-reading card - G + D

Try once without stopping. Then diagnose.

Pass condition: keep a steady slow pulse, correct at least 8/10 pitches, no panic pause longer than one beat. If not, slow the metronome and repeat tomorrow.

80.4 Answer card - G + D

Answer: one beginner fingering

A musical staff in treble clef showing ten notes. The notes are D, E, F#, G, G, A, B, C, G, and A. The first four notes (D, E, F#, G) are on the D string, and the remaining six notes (G, A, B, C, G, A) are on the G string. Fingerings are indicated by 'f' followed by a number. The notes are positioned as follows: D (first line), E (second line), F# (third line, with a sharp sign), G (third space), G (first space), A (first line), B (first space), C (first line), G (first space), and A (first line).

Note	String	Fingering

80.8 Sight-reading card - Full first-position landmarks

Try once without stopping. Then diagnose.

Pass condition: keep a steady slow pulse, correct at least 8/10 pitches, no panic pause longer than one beat. If not, slow the metronome and repeat tomorrow.

80.8 Answer card - Full first-position landmarks

Answer: one beginner fingering

A musical staff in treble clef showing ten notes with their corresponding fingerings. The notes are: A (first line), G (first space), B (second line), D (second space), G (third line), B (third space), D (fourth line), F# (fourth space, marked with a sharp), A (fifth line), and C (first line of the next staff). Each note has a vertical line indicating the finger number: 3, 0, high 2, 0, 0, high 2, 0, high 2, 0, and low 2 respectively.

Note	Fingering
A	E str f 3
G	G str f 0
B	G str f high 2

G	G str f 0
B	G str f high 2
D	D str f 0
F#	D str f high 2
A	A str f 0
C	A str f low 2

81. Public-domain mini-piece: Twinkle theme in A major

Why it is pedagogically useful: it stays mostly on A/E strings, drills A-major finger spacing and creates room to vary bow rhythms - exactly the kind of “future skill planted early” that Hahn praised in Suzuki training. The exact Suzuki variations are copyrighted; this page uses only the public-domain tune.

82. Public-domain mini-piece: Ode to Joy fragment in G major

Read phrase 1

Read phrase 2

This is a reading drill, not a claim that every published beginner arrangement uses this exact register/fingering.

83. Original melody drill: “G-major steps and skips”

All original: no memorized song to rescue you

Sight-read slowly. This tests actual symbol-to-finger decoding because you cannot rely on knowing the tune in advance.

84. A Hahn-inspired repertoire spine

Documented facts first: Hahn began with Suzuki, retained daily listening habits, and later did substantial technique/étude work with Klara Berkovich, especially Wohlfahrt. That suggests a balanced spine: ear/listening + simple repertoire + technical studies + progressively serious music.

Stage	Repertoire/technical idea
Start	Suzuki Vol.1 sequence (licensed book), Twinkle rhythm work, open-string tone
Early first position	Ode to Joy, folk/public-domain melodies, original sight-reading drills
Technique base	selected Wohlfahrt Op.45 Book I + Ševčík Op.1 first-position patterns
Student concerto stage	Rieding/Küchler/Seitz type concertos depending teacher/edition
Early concerto repertoire	Vivaldi A minor/G minor; Bach Double; Handel sonatas
Pre-Mozart bridge	Accolay, Bach A minor/E major, Haydn G, Fiocco/other étude-repertoire as appropriate
Destination	Mozart K.216 when shifting, intonation, Classical bowing/style and speed are ready

This is a possible ladder, not a universal exam ranking. Teachers legitimately sequence these works differently.

86. Classical ladder before/around Mozart (1/4)

#	Piece / study	Stage note
1	Twinkle theme / variations as assigned	early
2	Lightly Row	early
3	Song of the Wind	early
4	Go Tell Aunt Rhody	early
5	O Come, Little Children	early
6	May Song	early
7	Long, Long Ago	early
8	Allegro (Suzuki repertoire)	early
9	Perpetual Motion	early
10	Bach/Suzuki Minuets	early

Sequence is intentionally approximate: repertoire difficulty depends on movement, edition, tempo, cadenza and individual strengths.

86. Classical ladder before/around Mozart (2/4)

#	Piece / study	Stage note
11	Schumann - The Happy Farmer	early
12	Gossec - Gavotte	early
13	Wohlfahrt Op.45 selected studies	developing
14	Ševčík Op.1 first-position exercises	developing
15	Kayser Op.20 selected studies	developing
16	Rieding Concerto in B minor Op.35	developing
17	Köchler student concerto in D major	developing
18	Seitz Student Concerto No.2	developing
19	Seitz Student Concerto No.5	developing
20	Vivaldi Concerto in A minor Op.3 No.6	developing

Sequence is intentionally approximate: repertoire difficulty depends on movement, edition, tempo, cadenza and individual strengths.

86. Classical ladder before/around Mozart (3/4)

#	Piece / study	Stage note
21	Bach Double Concerto (student part/sections as assigned)	developing
22	Handel Sonata in F major	developing
23	Handel Sonata in D major	developing
24	Vivaldi Concerto in G minor	developing
25	Fiocco - Allegro	intermediate
26	Accolay Concerto No.1 in A minor	intermediate
27	Bach Concerto in A minor	intermediate
28	Haydn Concerto in G major	intermediate
29	Dvořák Sonatina (selected movements)	intermediate
30	Beethoven Romance in F	intermediate

Sequence is intentionally approximate: repertoire difficulty depends on movement, edition, tempo, cadenza and individual strengths.

86. Classical ladder before/around Mozart (4/4)

#	Piece / study	Stage note
31	Monti - Czardas	intermediate
32	Bach Concerto in E major	intermediate
33	Vivaldi Four Seasons - selected passages	intermediate
34	Viotti Concerto No.23 (teacher-dependent)	intermediate
35	Kreutzer selected études (later)	later/pre-Mozart
36	Mazas selected études	later/pre-Mozart
37	Dont selected studies (later)	later/pre-Mozart
38	Mozart Rondo / easier Classical works as assigned	later/pre-Mozart
39	Mozart Violin Concerto No.3 K.216 - slow study	later/pre-Mozart
40	Mozart K.216 - performance project	later/pre-Mozart

Sequence is intentionally approximate: repertoire difficulty depends on movement, edition, tempo, cadenza and individual strengths.

PART VIII - YOUR VIVALDI SPRING LINE

Use a real line you have already struggled with as the test case.

Goal: look at the screenshot and separate staff position, finger number, rhythm beams, bow marks and expressive choices.

87. Original screenshot

Do not listen to the teacher's vibrato and try to “copy the wobble” as if it were extra notes. The staff is the authority for the written pitch sequence; performance effects are a separate layer.

88. Annotated screenshot

Use the annotations to locate: key signature, time signature, finger numbers, single-beam eighth-note groups, two-beam sixteenth-note groups, dotted values, and bow marks. Then return to the original page and see whether your eye can find them without arrows.

89. How to decode one Vivaldi group

Use this order every time: 1) read the staff pitch; 2) apply key signature; 3) choose string/finger; 4) read duration from note/beam; 5) check slur/bow mark; 6) only then add dynamics/vibrato/style.

If the written finger number and your expected finger conflict, stop and ask why: the edition may be suggesting another string/position, or your key-signature reading may be wrong.

90. Vivaldi practice worksheet

On a printed copy of the screenshot, mark every item with a different letter: K = key signature, T = time signature, F = fingering number, B1 = one beam, B2 = two beams, D = duration dot, U/D = bow direction, S = slur.

Then choose only one measure. Write the pitch names under it. Do not play until you can say them in rhythm.

90A. What success looks like on the Vivaldi line

You can explain why a fast pair contains two real pitches; you can distinguish beam from slur; you can say whether a note is sharpened by the key signature; you know which finger the editor suggests; you can play the line slowly without needing vibrato. That is a successful reading milestone.

PART IX - MOZART K.216: READ THE PAGE BEFORE YOU CAN PLAY THE PAGE

This is the destination score, not a day-one exercise.

Goal: understand the language of the first page now; acquire the physical technique over time.

91. Mozart Violin Concerto No.3 - factual map

Mozart's Violin Concerto No.3, K.216, is in G major and dates from 1775. The three movements are Allegro, Adagio and Rondeau: Allegro. Your uploaded violin PDF has 15 pages; we use its first page as the visual destination.

The score is public-domain repertoire. Different editions can have different fingerings, bowings, cadenzas and editorial markings, so always identify your edition before comparing instructions.

92. First system - original visual

Violino.

Do not try to perform it yet. First perform a visual scan: locate treble clef, one-sharp key signature, common-time C, Allegro, metronome suggestion, Tutti, dynamics, slurs, rests, vertical stacks and beamed groups.

93. First system - annotated decoder

W. A. Mozart.

Allegro. (♩ = ca. 126.)

Tutti.

1 2 3 4 5 6 7 8 9 10 11 12

f *p* *f* *p* *f* *p* *f*

Some markings belong to the historical/editorial part rather than “notes your left hand plays.” The crucial reading skill is categorization: pitch instruction, rhythm instruction, bow/articulation, dynamic, navigation, or editorial text.

94. What the beginning literally tells you before the first note

Item	Meaning	Your response
Allegro	fast/lively tempo character	do NOT practice at final tempo yet
quarter-note $\approx$ 126 (edition)	metronome suggestion	practice much slower
treble clef	violin pitch coordinate system	use treble staff mapping
one sharp	G-major key signature: F-sharp	apply F-sharp to written Fs
C	common time = 4/4	count four quarter beats per measure
Tutti	ensemble/tutti passage indication	not a finger instruction
p / f	dynamic level	shape bow speed/weight later

95. Why the first Mozart line looks much harder than your G-major scale

It layers skills: multiple stops/chords, rests, faster subdivisions, slurs/articulations, dynamic changes and phrasing. Later solo passages also require position choices and fast coordination. The pitch language is not a different alphabet - it is the same staff system under higher technical density.

That is encouraging: your current G-major scale is not unrelated to Mozart. It is the same tonal vocabulary at a much simpler density.

96. Mozart reading milestone 1 - no violin required

Take the first system and point to each symbol. Say only its category: clef / key / meter / note / rest / beam / slur / dynamic / articulation / text. Do this until the page stops looking like one undifferentiated drawing.

97. Mozart reading milestone 2 - pitch landmarks

Circle every open-string landmark you can identify from staff position. Then name neighboring notes by step. Apply F-sharp from the key signature. Do not assign advanced fingerings yet.

If you cannot confidently name a pitch, return to Part II. That is not failure; it tells you exactly which layer is missing.

98. Mozart reading milestone 3 - rhythm only

Ignore pitch. Clap one measure at a time. Identify quarter/eighth/sixteenth values, rests and dots. If chords are stacked, clap them as one rhythmic event, not multiple sequential beats.

99. Mozart reading milestone 4 - technique triage

Mark/passage type	Can you read it now?	Can you perform it now?
single first-position pitch	yes	often yes, slowly
eighth/sixteenth group	yes after rhythm work	slowly, then build speed
double stop/chord stack	yes	NEXT/LATER
slur	yes	basic slurs NEXT/NOW depending comfort
trill/ornament	yes as symbol	LATER/style-dependent
third/fourth position passage	yes conceptually	LATER
vibrato on long note	not required by ordinary notehead	LATER expressive choice/edition/style

100. Mozart fourth-position bridge [LATER]

When you eventually encounter a quick passage where staying on one string/position is smoother than constant shifts, fourth position becomes a practical tool. Violinspiration explicitly demonstrates fourth position using a Mozart Concerto No.3 passage and notes how it can smooth the rapid line.

This is exactly why the book teaches score reading before demanding every technique: you can understand the destination years before every physical solution is automatic.

101. The end-of-year test

Open an unfamiliar first-position violin page. Without playing, you should be able to identify: clef, key signature, meter, note names in your learned range, basic rhythm values/rests, slurs/ties, dynamics, common articulations, bow direction marks and repeats. Then you should be able to sight-read a simple line slowly while keeping pulse.

Open Mozart K.216. You may not be able to perform it yet, but you should be able to explain why it is hard and identify most of the written instructions. That is real progress.

REFERENCE - SOURCES, VIDEOS AND WHAT TO USE NEXT

Research links used to design the expanded edition.

These sources disagree on some sequencing details. When that happens, this book labels the choice as teacher-dependent rather than pretending there is one universal violin method.

Copyright / sheet-music note

Public-domain melodies and original drills can be printed directly in this workbook. Modern pop songs and the Suzuki method editions are copyrighted; the book lists them as practice targets and points you toward licensed/tutorial sources instead of reproducing unlicensed full notation.

The Mozart score and older étude sources listed via IMSLP/your provided score are public-domain repertoire, though particular modern editions, fingerings, bowings and cadenzas can still carry editorial rights.

Your immediate next 14 practice sessions

- 1: G string reading + G-major Stage A
- 2: D string reading + G-major Stage B
- 3: Open-string landmark quiz + G-major Stage C
- 4: mixed G/D worksheet + answer
- 5: eighth-note rhythm + Ode to Joy fragment
- 6: A-string notes + D-major scale preview
- 7: review only; record yourself for 60 seconds
- 8: low/high 2 contrast F/F-sharp and C/C-sharp
- 9: key signature worksheet + G major
- 10: Vivaldi screenshot: label symbols only
- 11: Vivaldi: decode one measure without vibrato
- 12: basic slurs + détaché contrast
- 13: first Wohlfahrt/Ševčík-style short pattern from a legal source
- 14: open Mozart page: identify symbols, do NOT force performance

After session 14, repeat the cycle with slightly harder reading rather than jumping straight into shifting.

Final principle

Reading tells you what the music asks. Technique gives your body ways to execute it. Listening tells you whether the result is musical. Train all three, but do not confuse them.

Your first victory is not “I can imitate a fingering video.” It is: I can look at a note, know what it is, know where it lives on the violin, understand how long it lasts, and explain the other marks around it.
